

VARUN RATHI

Software UI Developer - Angular & JavaScript

+91-6367649910 varunrathi8432@gmail.com linkedin.com/in/varun-rathi-1b7467280 Noida, Uttar Pradesh, India

PROFESSIONAL SUMMARY

Software UI developer with 1+ year of experience building user-facing features on a multi-tenant Angular SaaS used by field-operations teams - focused on simplifying complex operational workflows and translating designs and wireframes into high quality code, unit tests (UT), and functional tests (FT). Strong proficiency in JavaScript (ES6+), including DOM manipulation and the JavaScript object model, applied daily across Angular 18 / 20, TypeScript, RxJS, Reactive Forms, AG Grid Enterprise, RESTful APIs, and JSON Web Token (JWT) authentication. Owns reusable components and front-end libraries - a shared component library, a JSON-driven form builder, JWT HTTP interceptors, and role- and permission-based route guards - that the wider team builds on. Comfortable with modern front-end build pipelines and tools (Webpack, Babel, NPM, Angular CLI), GIT, e2e unit tests, and Playwright functional tests, applying secure coding practices and protecting user privacy throughout. Embraces AI-driven tools (GitHub Copilot, Claude) to enhance UI development and user experience quality.

TECHNICAL SKILLS

Languages & Core: JavaScript (ES6+, DOM manipulation, JavaScript object model, prototypes, async/await), TypeScript, HTML5, CSS3, SCSS, Java

UI Frameworks: Angular 8 / 18 / 19 / 20, RxJS, Signals, Standalone Components, Reactive Forms, NgRx Signal Store (immutable update patterns), Angular Material, PrimeNG, AG Grid Enterprise, Angular CDK, Angular Router; familiar with React.js component model and core principles

Build Pipelines & Tooling: Webpack, Babel, NPM, Angular CLI, ESLint, Prettier, code-splitting, lazy-loading, source maps; GIT, GitHub, GitLab

APIs, Authorization & Security: RESTful APIs, JSON Web Token (JWT), OAuth 2.0 (Google / Microsoft SSO), Firebase Authentication, AES-256 payload encryption, reCAPTCHA v3, secure coding practices, user-privacy controls

Unit & Functional Testing (UT & FT): Playwright (functional / end-to-end tests), Lighthouse CI, axe-core, WCAG AA accessibility

DevOps & AI Tools: Nginx, GitHub Actions, AWS ECR / SSM, CI/CD pipelines; GitHub Copilot, Claude, ChatGPT for pair-programming, code review, and rapid prototyping

Methodologies & Soft Skills: Agile / Scrum, Design Thinking, software development best practices, component-driven development, responsive and mobile-first design, Progressive Web Apps (PWA), performance optimization; problem solving, cross-functional collaboration with design and product, code review, mentoring, ownership

PROFESSIONAL EXPERIENCE

Software Developer, Zapium (formerly FieldCircle)

December 2024 - Present | Noida, India

- Develop new **user-facing features** across CRM, inventory, HRMS, inspections, scheduling, work orders, and timesheets in a multi-tenant **Angular 18** SaaS, translating Figma designs and wireframes into high quality, responsive UI built with lazy-loaded modules and a custom router preloading strategy.
- Built and maintain a **reusable component library and front-end primitives** - buttons, modals, tables, form controls, directives, pipes, and route resolvers - consumed by the wider team to keep UX consistent and accelerate delivery, with **design-thinking** and simplification at the core.
- Designed and built a JSON-driven dynamic **form builder** so new forms ship through backend configuration instead of code releases - clients self-serve field types, validations, defaults, and mobile-specific styling, reducing engineering load and improving time-to-value.
- Built a tenant-aware HTTP **interceptor** handling **JSON Web Token (JWT)** authentication, refresh flows, multi-tenant headers, and centralized 401 / 403 / 5xx error handling; implemented role- and permission-based route guards - applying **secure coding practices** and protecting **user privacy** across the app.
- Integrated **RESTful APIs** end-to-end with strongly typed TypeScript models and RxJS; configured **AG Grid Enterprise** for sorting, server-side filtering, inline editing, row grouping, and custom cell renderers on data-heavy operational screens. Migrated performance-critical components to OnPush change detection with the takeUntil(destroyed\$) RxJS pattern, eliminating subscription leaks.
- Shipped a multi-step **signup and onboarding flow** with OTP verification, **Google / Microsoft OAuth 2.0** single sign-on, reCAPTCHA v3, and AES-256 payload encryption.

- Authored **e2e unit tests** and **functional tests** (Playwright) covering services, guards, interceptors, and end-to-end flows; debugged production issues and delivered hotfixes with quality and urgency.
- Drove adoption of new technologies - migrated parts of the codebase to **Angular 20** (standalone components, Signals, functional guards / interceptors, and the `@if / @for / @defer` control-flow syntax); contributed to an internal **admin console** for managing tenants, users, roles, and permissions across QA, US, and APAC environments.
- Own the front-end build and deployment pipeline (**Webpack / Angular CLI, NPM, Nginx, GitHub Actions, AWS ECR / SSM**); coach teammates through code reviews and embed **AI-driven tools** (GitHub Copilot, Claude) into daily UI development to enhance velocity and user-experience quality.

PROJECTS

TaskFlow - Task Manager Application

Angular 19, Firebase Authentication, Firestore, NgRx Signal Store, AG Grid, FullCalendar, CDK DragDrop

- Built a production-grade task manager featuring a Kanban board with drag-and-drop, calendar drag-to-reschedule, AG Grid task list, analytics charts.
- Enforced per-user Firestore isolation through security rules; implemented signal-based stores, functional route guards, JWT-based HTTP interceptors, and lazy-loaded routes built from reusable component primitives.

Weather Forecast Progressive Web App

Angular 18, Signals, ngx-translate, Leaflet, Chart.js, Cypress, axe-core, Docker

- Delivered weather forecasts, AQI alerts, and a transparent rule-based activity-suggestion engine; achieved WCAG AA accessibility compliance and Lighthouse CI budgets (accessibility 0.95+, performance 0.85+); tuned the Webpack / Angular CLI build and deployed via a multi-stage Docker and Nginx setup.

Developer Portfolio Website

Angular 19, Signals, SCSS, Custom Directives, Vercel

- Animated portfolio with dark and light themes, custom IntersectionObserver, 3D-tilt and count-up directives, route animations, and a tag-filterable blog - emphasizing reusable directive primitives and a polished, simplified user experience.

TechBlog (Academic Project)

Java, JSP, Servlets, JDBC, MySQL, Bootstrap 5

- Full-stack technical blog with authentication, post categorization, and AJAX-driven likes powered by the Fetch API.

EDUCATION

B.Tech, Computer Science and Engineering

2020 - 2024 CGPA: 8.7 / 10

Rajasthan Technical University (Arya College), Jaipur

Senior Secondary (Class XII)

2019 - 2020 77 / 100

Red Rose Public School, Jodhpur

Secondary (Class X)

2017 - 2018 84 / 100

Red Rose Public School, Jodhpur

ACHIEVEMENTS & LANGUAGES

- **Hackathons:** Participant at Code Red Hackathon (ACIC VGU-Foundation); Coordinator and Instructor at Smart India Hackathon, ACE Jaipur - mentored teams on technical execution and presentation.
- **Continuous Learning:** Actively expanding into **React.js** and its core principles, popular React workflows such as **Flux / Redux**, and immutable data-structure libraries (e.g., **Immutable.js**); deepening proficiency with AI-assisted development workflows to broaden beyond Angular.
- **Languages:** English (professional working proficiency), Hindi (native).
